

DROP OFF AS A SERVICE UI FLOW

I want to submit my app so i go to the market place home and click sumit app

when i click on submit app
the section opens up
also provides me a template of
the manifest file .

i also have a button to
upload my app

the system then prompts me to download a
manifest file before i upload my code
i can download it by clicking here

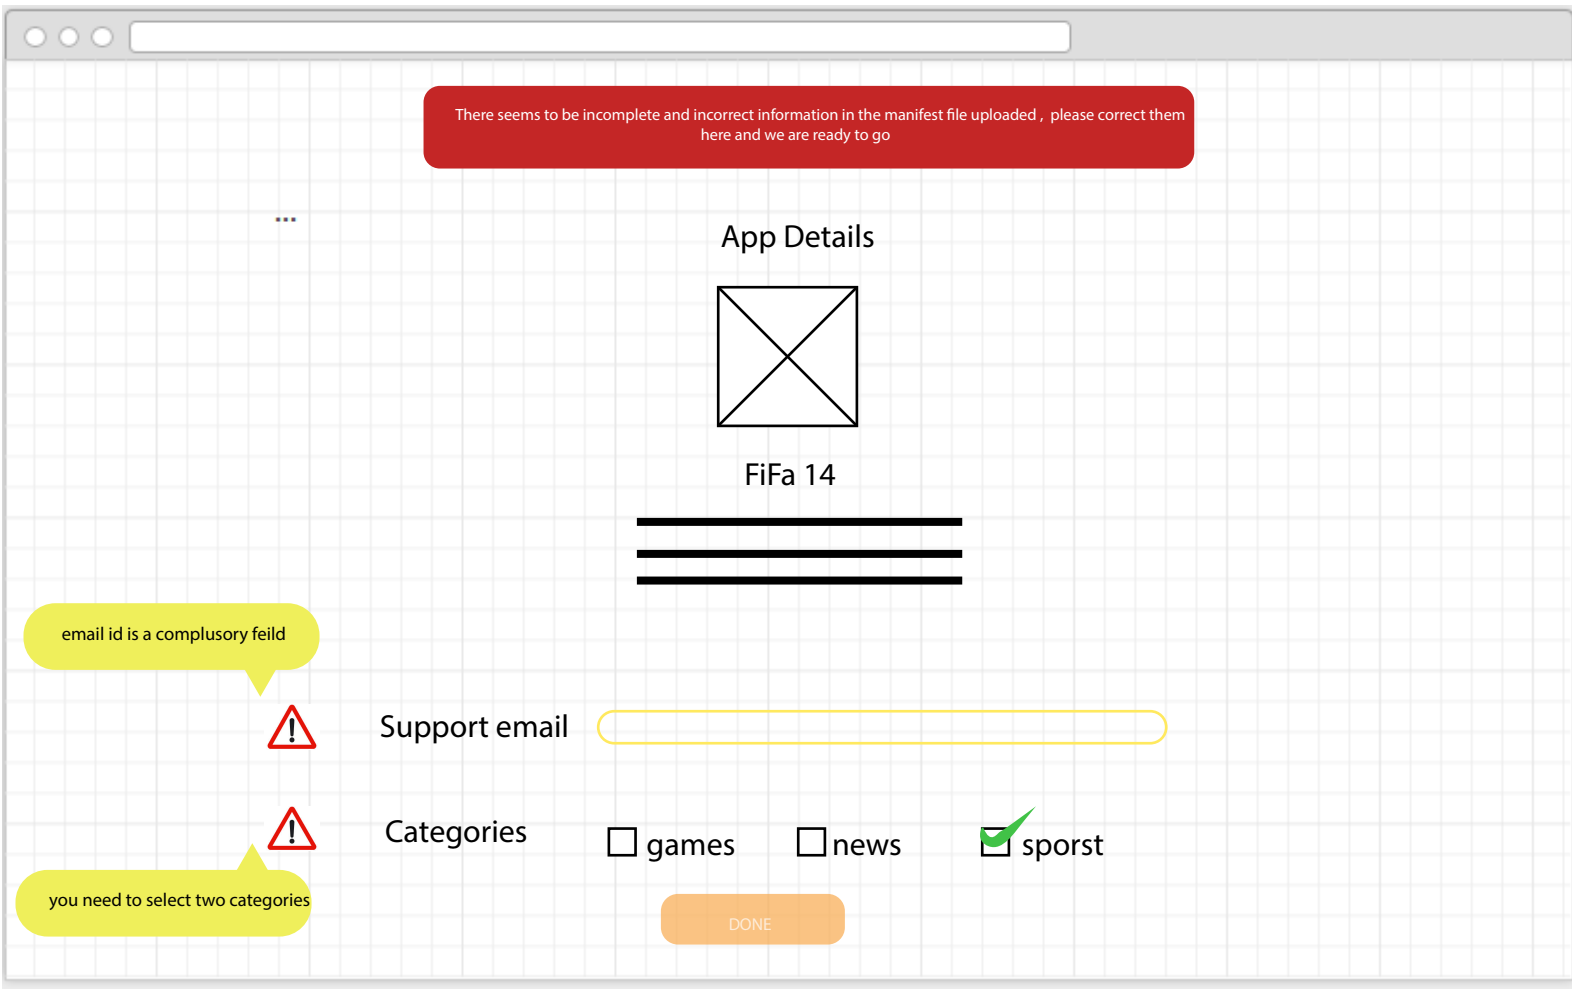

it provides me with a template for the
manifest fie

once i upload my code there are 3 things
that can happen

1. The manifest i have made is proper
with no errors or missing feilds

2. The manifest i made has a few mistakes
and some incomplete feilds

3. i forgot to upload the manifest
along with my code

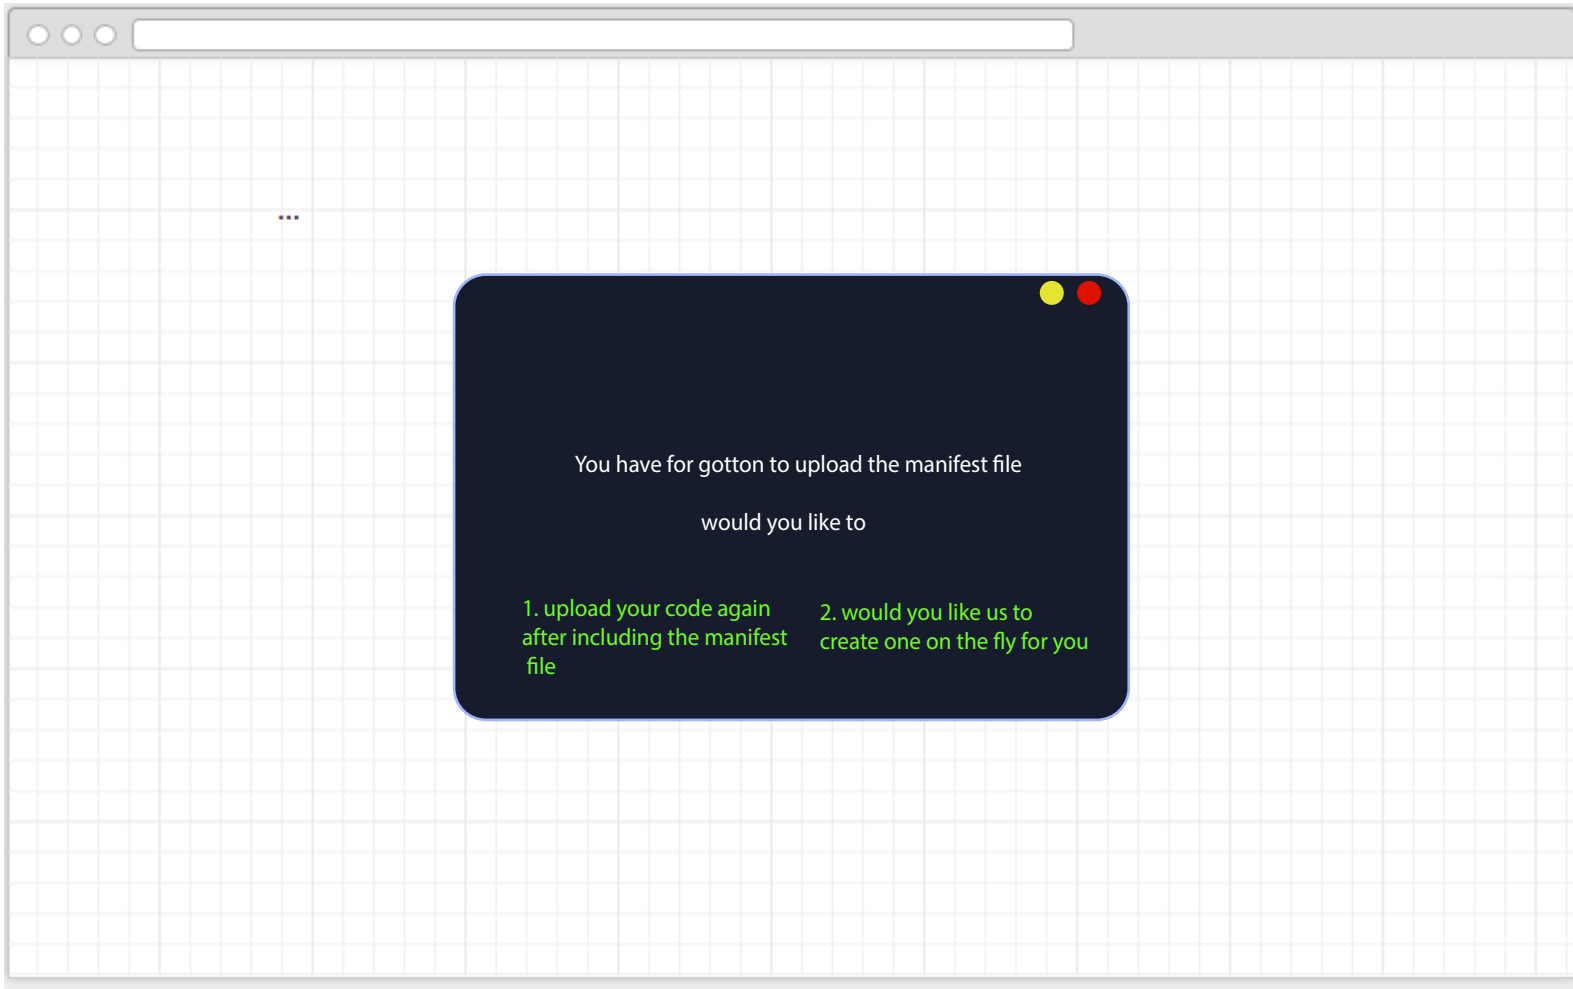

there is a ui form that on the screen it is telling me that i have left a few feilds and there are erros on a few feilds
only the feilds with missing and incorrect values are shown , ther others are not shown

the feild i have missed out are outlined in yellow and as i complete them , they turn to green

the feilds that i have entered wrong are in red and go to yellow when i erase the content and
green when i fill them out properly i am also provided with a warning icon that tells me what exactly
is wrong and also tells me how i can correct it

also the done button is disabled till i finish all the feild that are red or yellow , i.e the only once all feilds are
green can i see the done button enabled

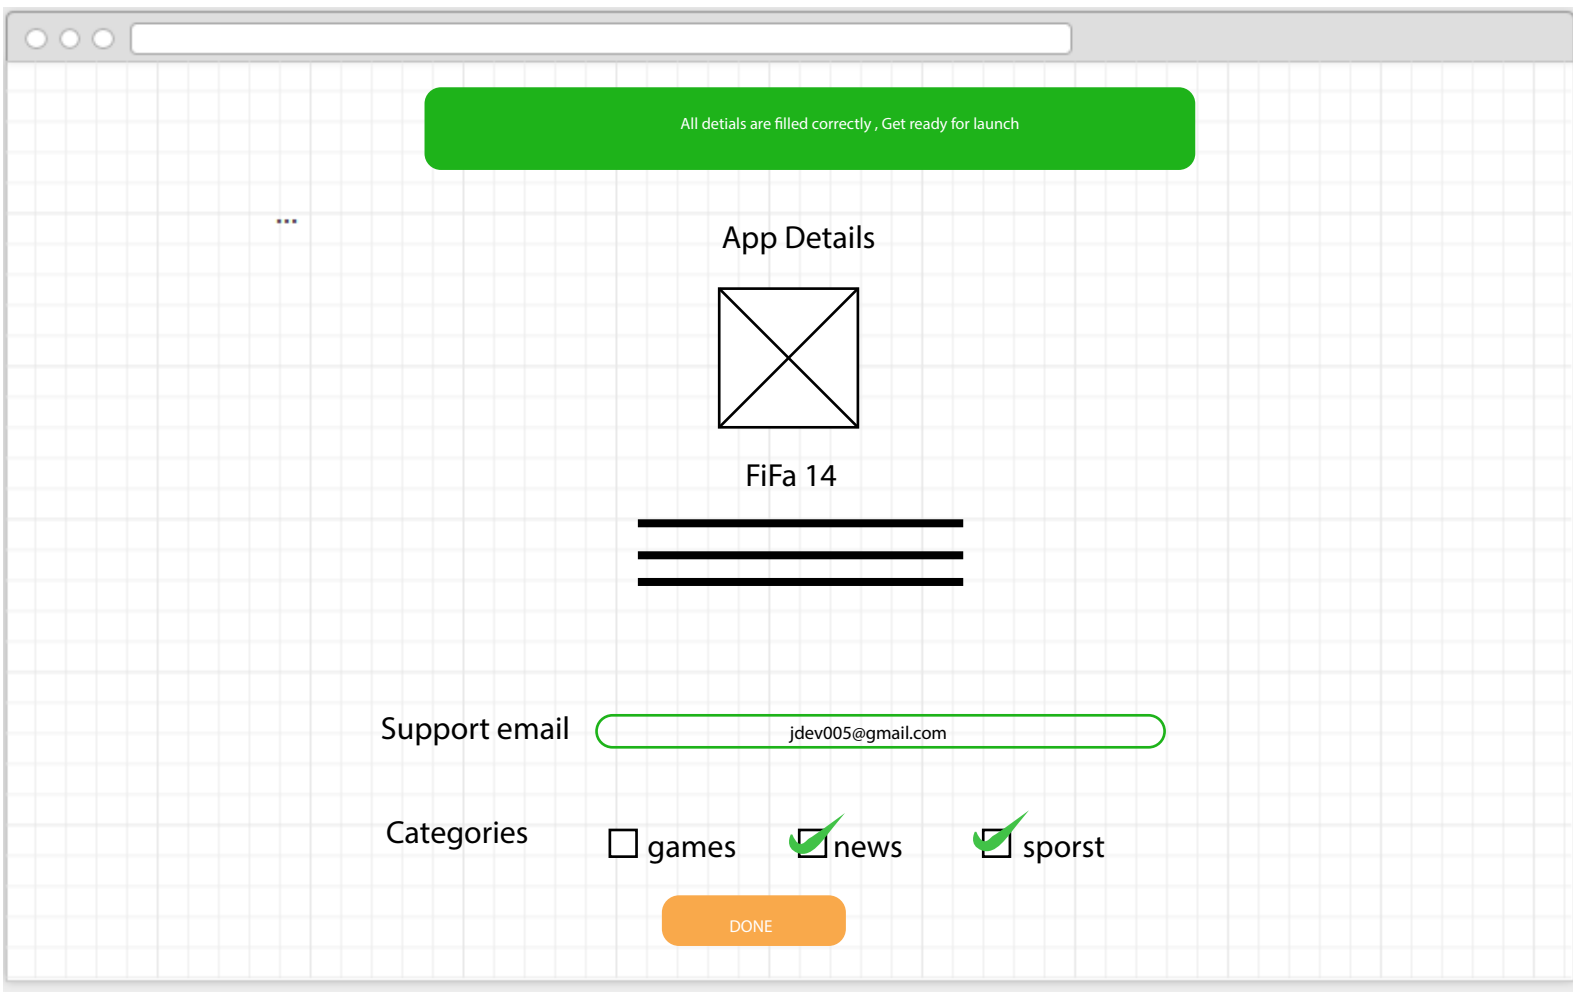

there is a modal that has popped on the screen
it is telling me that i have forgotten to fill the manifest
and give me an option to either upload the manifest
or to create a manifest on the fly using a UI

click option 1
and we go back here

for option 2 we go here ,
the only difference is all the feild will
be blank and listed for the user to complete

once i enter the correct details

once all the feilds are complete the colors changes from red to green and also the done button is enabled
