

# UI flow: App Manager is Devhub

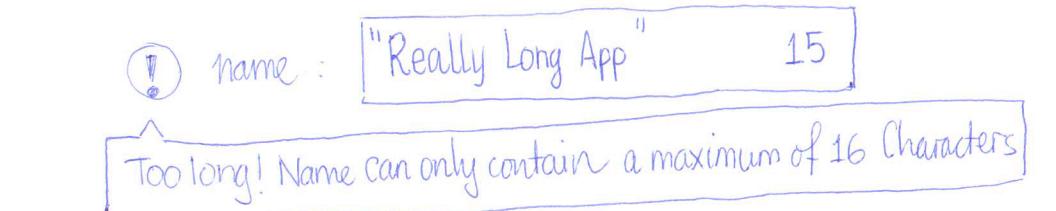

Access the App Manager by using Firefox's Tools menu

The app manager opens. Add an app by clicking either "Add packaged app" or "Add hosted app"

An app has been added. Note how every section that's incomplete is marked (in this example, the mark is a "!").

The Manifest Editor should not only tell user that a section is incorrect. It should also tell him/her how to fix it, and provide tools to make fixing as easy as possible.

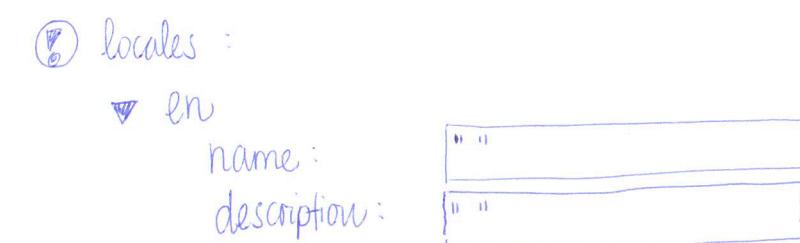

In this example, the name value is found to be too long. Rather than simply telling user that the name is too long, Manifest Editor provides a character counter to help.

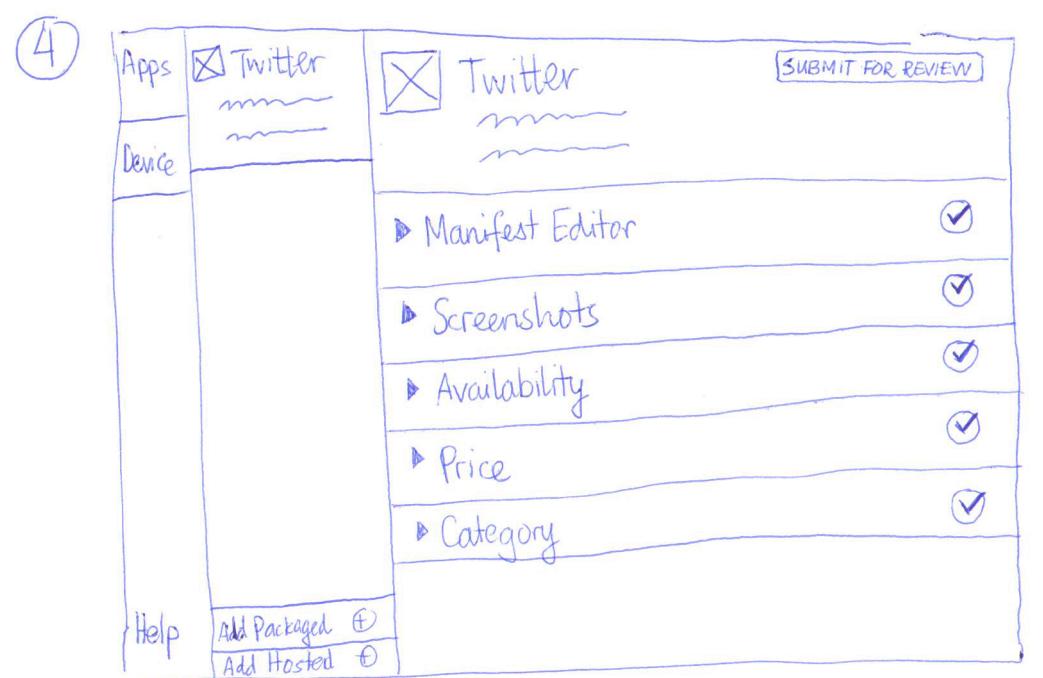

In this example, the manifest doesn't have a locale declared. The Manifest Editor asks user to add a new locale.

When clicked, the add new locale link expands to let user select a locale without knowing its code (en, es, it, jp, etc.)

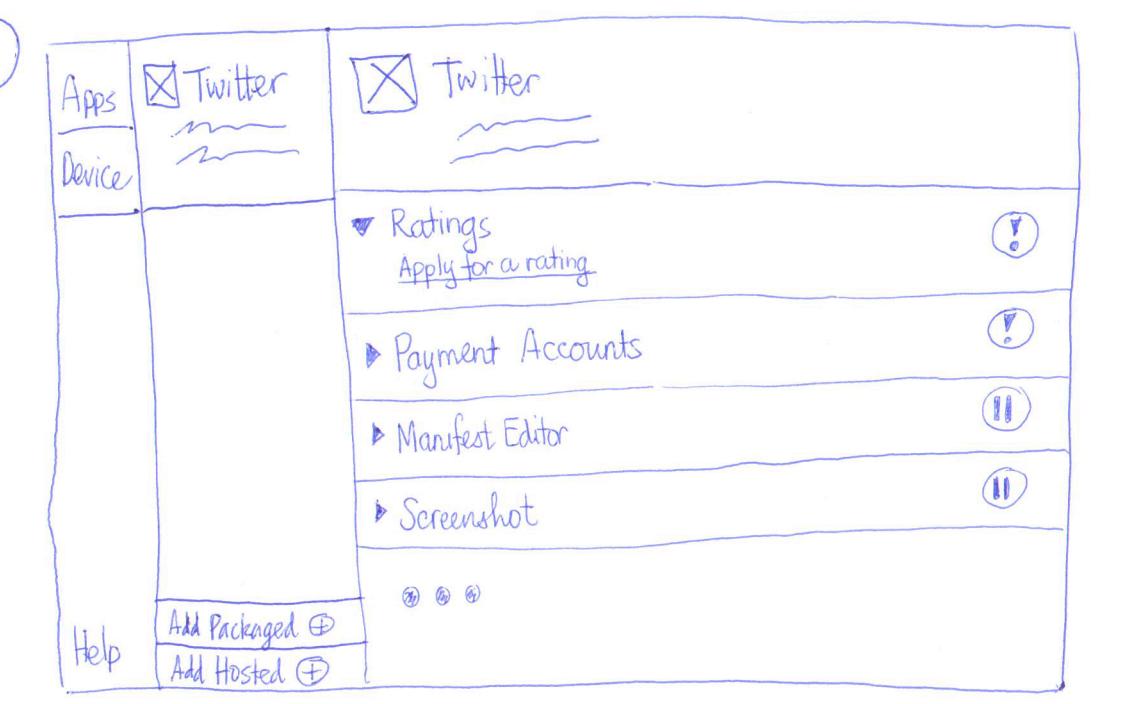

A new locale is added. Note the character counter.

The rest of the incomplete sections are filled in normally. In this example, all the sections have been filled in.

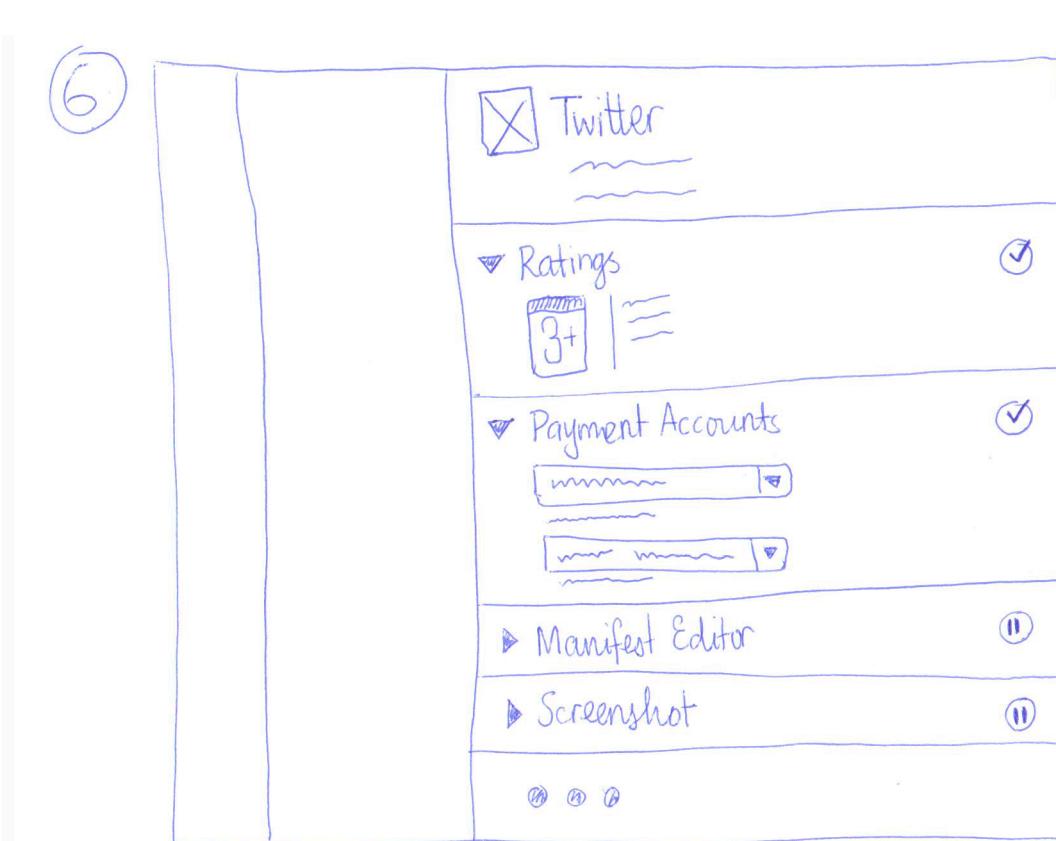

Once everything is okay, the "Submit for Review" button is enabled.

Note that all throughout this process, App Manager should continually validate each section and make sure that it's not producing an error that will hamper or delay the review process.

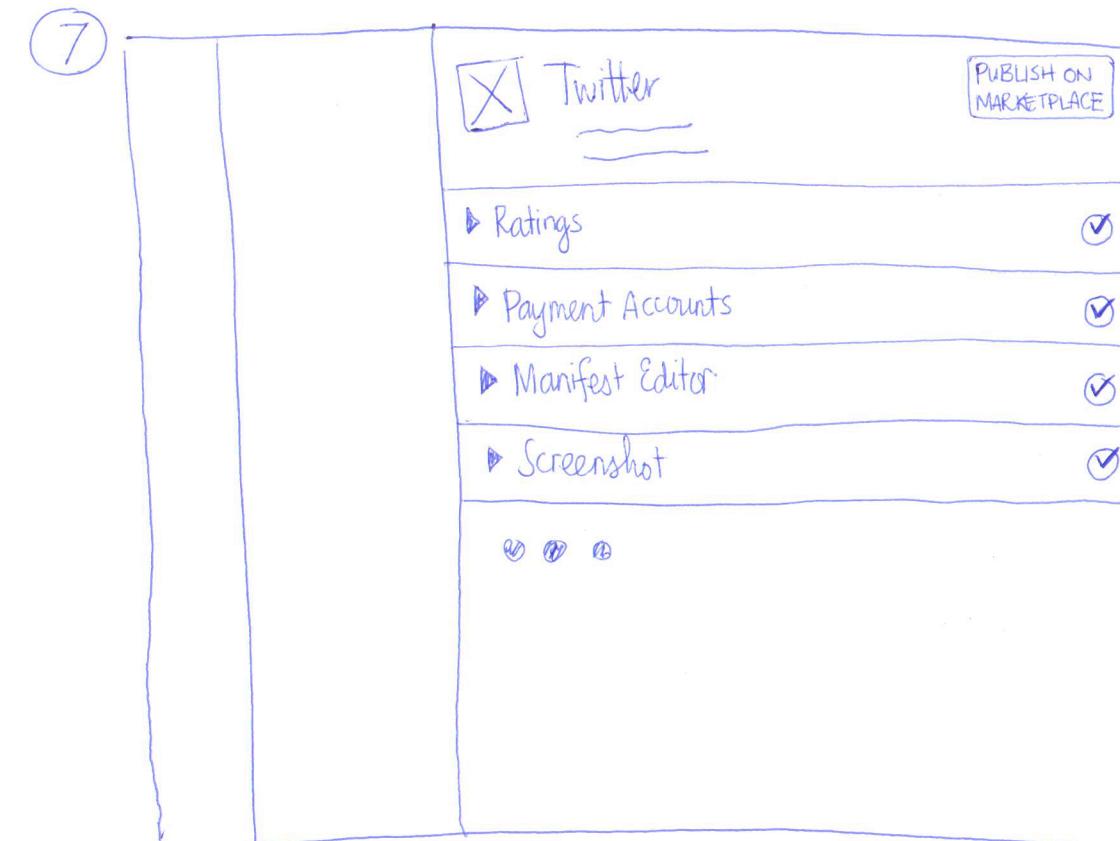

The app has been submitted for review. What's next? Next, user gets to apply for ratings and payment accounts. Note how two new sections called "Ratings" and "Payment Accounts" appear up top, with a notice.

Note also how the rest of the sections have "pause" icons to their sides. This indicates that user can't modify the section, because it's currently under review.

User has applied for ratings and payment accounts. Great. This means that we can put an "Okay" status besides those sections. But note how the review process isn't done yet, so the rest of the sections are still "paused". They can't be edited yet.

The review process is done, and the app is approved. The button "Publish on Marketplace" is enabled as a result. Click on it to publish.
